EDUCATION

Simon Fraser University

Bachelor of Science in Computer Science

September 2023 – Present

Vancouver, BC

- Dean's Honor Roll (Fall 2024) | Faculty of Applied Science
- Dean's Honor Roll (Summer 2025) | Faculty of Applied Science

Experience

Full Stack Engineer Intern - International Department

FEITIAN Technologies Co., Ltd.

September 2025 – December 2025

Beijing, China

- Delivered end-to-end development of three production systems for a post-quantum cryptography (PQC) initiative, covering architecture design, full-stack implementation, testing, CI/CD, and production deployment.
- Coordinated cross-functionally with hardware engineering teams to align software and security requirements.
- Worked cross-border with US-based stakeholders; delivered production features primarily for US markets.
- Operated in a fully self-directed role, independently learning all knowledge and delivering complete projects without mentorship.

PROJECTS

Security Product Demo Platform

November - December 2025

- Built a user-oriented full-stack security demo platform with support for Post-Quantum Cryptography (PQC) algorithms for web authentication.
- Implemented secure registration/assertion flows (WebAuthn, OTP, Password) and production deployment on a private Ubuntu Server with CI/CD.
- Delivered self-service testing experience for security keys, OTP devices, mobile authenticator applications, and built-in platform authenticators with bilingual UX.

Tech Stack: Python (Flask), React.js, TypeScript, Tailwind CSS, C/C++ (liboqs), Docker

ML-DSA Software FIDO Authenticator

October 2025 – November 2025

- Implemented a Rust-based FIDO2/CTAP2 software authenticator with ML-DSA integration and virtual HID support.
- Built protocol, storage, and transport layers with secure key handling and Linux UHID integration.

Tech Stack: Rust (Trussed), C/C++ (liboqs)

Post-Quantum FIDO2/WebAuthn Platform

September 2025 – October 2025

- Developed a full-stack WebAuthn developer tools platform integrating Post-Quantum Cryptography algorithms with advanced testing and decoding tools.
- Extended Yubico's python-fido2 to support Post-Quantum COSE keys and attestation verification.
- Built a FIDO Metadata Service (MDS) explorer with automated updates, enabling search and validation of authenticators for testing.

Tech Stack: Python (Flask), JavaScript, HTML, CSS, C/C++ (liboqs), Docker

SKILLS

- **Programming Languages / Frameworks:** Python, C, C++, Java, HTML, CSS, JavaScript, React.js
- **Operating Systems:** Windows, Macintosh, Linux
- **Software & Tools:** Visual Studio Code, JetBrains IDEs, Google Cloud, Git, GitHub, Docker, Microsoft Office
